

27th WPI IIIS Seminar

“Development of micro-endoscope for in vivo Ca and FRET imaging in freely moving animals”

In vivo imaging is a powerful tool to analyze brain dynamics, especially when it becomes possible with the functional assessment of the circuits. We share our experience in developing a fiber-optic micro-endoscope which enables in vivo Ca and FRET imaging at cellular resolution in freely moving animals.

Speaker: Dr. Kazuo Funabiki

Vice Head, Systems Biology,
Osaka Bioscience Institute

Date: Thursday, February 13th, 2014

Time: 14:00-15:00

**Venue: Room #402, 4F, Health and Medical Science
Innovation Laboratory, University of Tsukuba**
