

170th WPI-IIIS Seminar

Topics on Research Ethics – #6

Ethics of Neuroscience and Neuroscientist

In the 21st century, neuroscience has been advanced to integrate with computational engineering, IT and/or AI to create new era of “Neurotechnology”. Since when academic discipline called “Neuroethics” launched in 2002, various philosophical, ethical, legal, and social issues have been raised and discussed to conceptualize what the neuroethics is and how to apply it in the real world. In this lecture, I will talk about history and current trends in neuroethics research including related activities in international organizations, and then discuss how neuroscientists should conduct their research in more ethical way, in other words, “Responsible Research and Innovation (RRI)”.

Dr. Tamami Fukushi

Office of Project Management,

Japan Agency for Medical Research and Development (AMED)

Date: **Thursday, January 20, 2022**

Time: **11:00 – 12:00**

Venue: **Join us online via Teams**

Register now! (deadline Jan.17)
